INTRODUCTION

Quality Plan

A Software Quality Plan (SQP) is a document that defines the quality objectives, standards, procedures, responsibilities, and quality assurance activities required to ensure that the software product satisfies specified requirements.

Development Plan

A Software Development Plan (SDP) is a document that describes how software will be planned, developed, tested, managed, and delivered throughout the Software Development Life Cycle (SDLC).

IMPORTANCE OF BOTH PLANS

- ★ **Ensure software quality and reliability.**
- ★ **Define project goals and responsibilities.**
- ★ **Reduce project risks and defects.**
- ★ **Improve communication among stakeholders.**
- ★ **Deliver software on time and within budget.**

Objectives of a Software Quality Plan

- ★ Define software quality objectives.
- ★ Establish quality standards and procedures.
- ★ Ensure compliance with organizational and industry standards.
- ★ Identify quality assurance activities throughout the SDLC.
- ★ Prevent defects before software release.

Objectives of a Software Quality Plan

- ★ Monitor and control software quality.
- ★ Ensure customer requirements are satisfied.
- ★ Support continuous process improvement.
- ★ Assign quality-related roles and responsibilities.
- ★ Reduce maintenance and rework costs.

Key Elements of a Software Development Plan

- **Project scope**
- **Project schedule**
- **Resource allocation**
- **Development methodology**
- **Risk management**
- **Deliverables**
- **Communication plan**

Objectives of a Software Development Plan

- ← **Define project scope and objectives.**
- ← **Plan project activities and milestones.**
- ← **Allocate resources effectively.**
- ← **Improve communication among project stakeholders.**
- ← **Identify and manage project risks.**

Objectives of a Software Development Plan
